Product introduction

## Elenos Group

**Elenos** was founded in **1977** in Ferrara, Italy

- Focused on providing a wide range of FM Transmitters, featuring the most compact products on the market  
*(First in the world to provide a 10KW FM in 4U only)*

**Itelco** Broadcast began in **1962** in Orvieto, Italy

- Specialized in digital modulation and high-power liquid-cooled systems  
*(Supplier of CERN for High-power amplifier involved on the Large Hadron Collider)*

**BE** was established in Quincy, Illinois in **1959**,

- Broadcast Electronics has an illustrious history that has played an influential role in many radio milestones

**BE** offers a wide range of high quality radio broadcast products, including automation software and transmitters for AM, FM and HD Radio.

**PROTELEVISION TECNOLOGIES** established in Denmark, over 50 years of experience,

- Broadcast formerly Philips TV & Test Equipment, is a leading designer and manufacturer of advanced future-proof modulation solutions for Digital TV and Radio standards (DVB-T/T2, ISDB-T, DAB+, ATSC 1.0 and ATSC 3.0) represented worldwide in more than 50 countries with over 30,000 installed units in daily operation.

## Today

The mission of the **Elenos group**, by utilizing its improved production capability and international sales networks, is to provide consumers with state-of-the-art radio and TV equipment for all modulation standards.

**With over 90 years of experience in the field**, the Elenos group has developed technologies for Network applications, Digital TV or FM Radio Systems, scientific applications and remote software control.

The Elenos group is an ideal partner in helping you develop your networks for your next digital migration.

### DVB-T2

Digital  
Video  
Broadcasting  
Terrestrial  
2 Second generation

- Experience

### Brief Company Introduction:

- Established in 1963 as Philips Test and Measurement
- 1964 First TV modulator introduced – more than 40 years of experience in the broadcasting market
- 1998 First generation DVB-T C-OFDM Modulator introduced (PT5775)
- Today more than 20.000 transmission site installations
- Per early 2003, PTT is owned by Managing Director Morten Simonsen

### ProTelevision Today:

- Located in Copenhagen, Denmark
- High focus on R&D – 25 engineers working solely on C-OFDM technology (DSP, RF, SW, HW)
- All production outsourced to ISO Certified specialists
- Calibration, verification and test certificate of each piece of equipment done at PTT (100 hours burn in)
- DVB member (actively participated in the creation of several standards)

# LEADING MANUFACTURER OF DTT MODULATORS

ATSC

ATSC 3.0

# Itelco transmitters and DVB-T2 Advantages

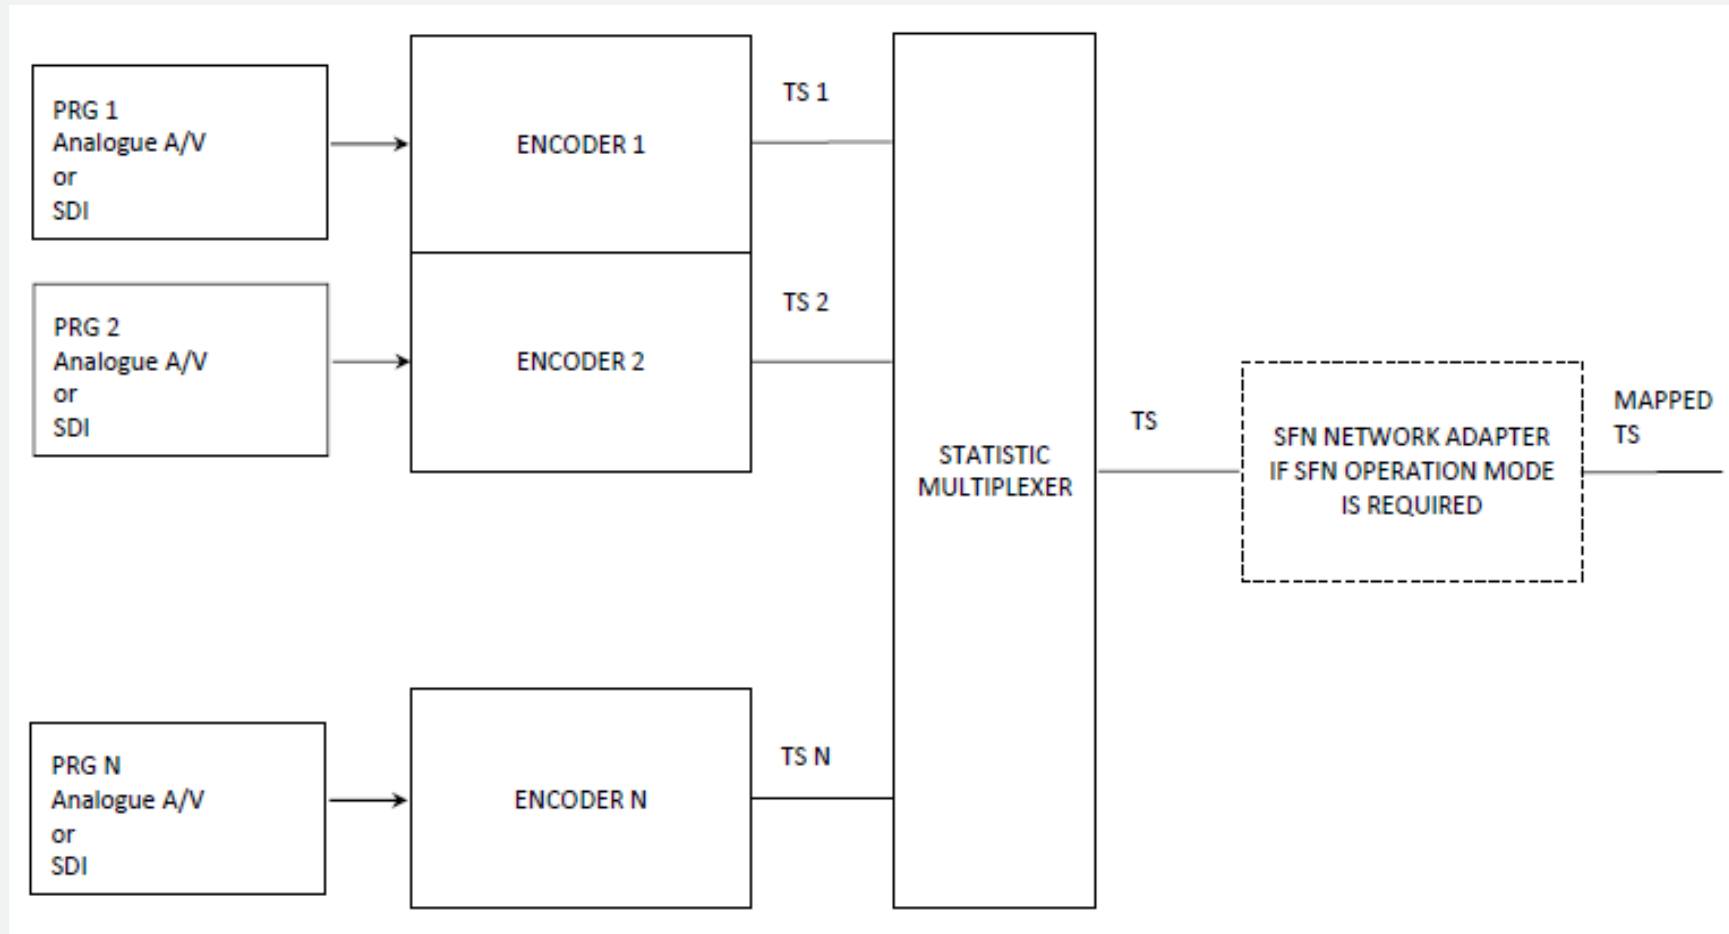

## Transmitters Advantages

- Ownership Cost reduction
- Power Consumption reduction thanks to the high efficiency technology
- Hot plug systems and full redundancy on RF and PS stage
- Extremely high MTBF thanks to the Itelco quality and experience

## DVB-T2 Advantages

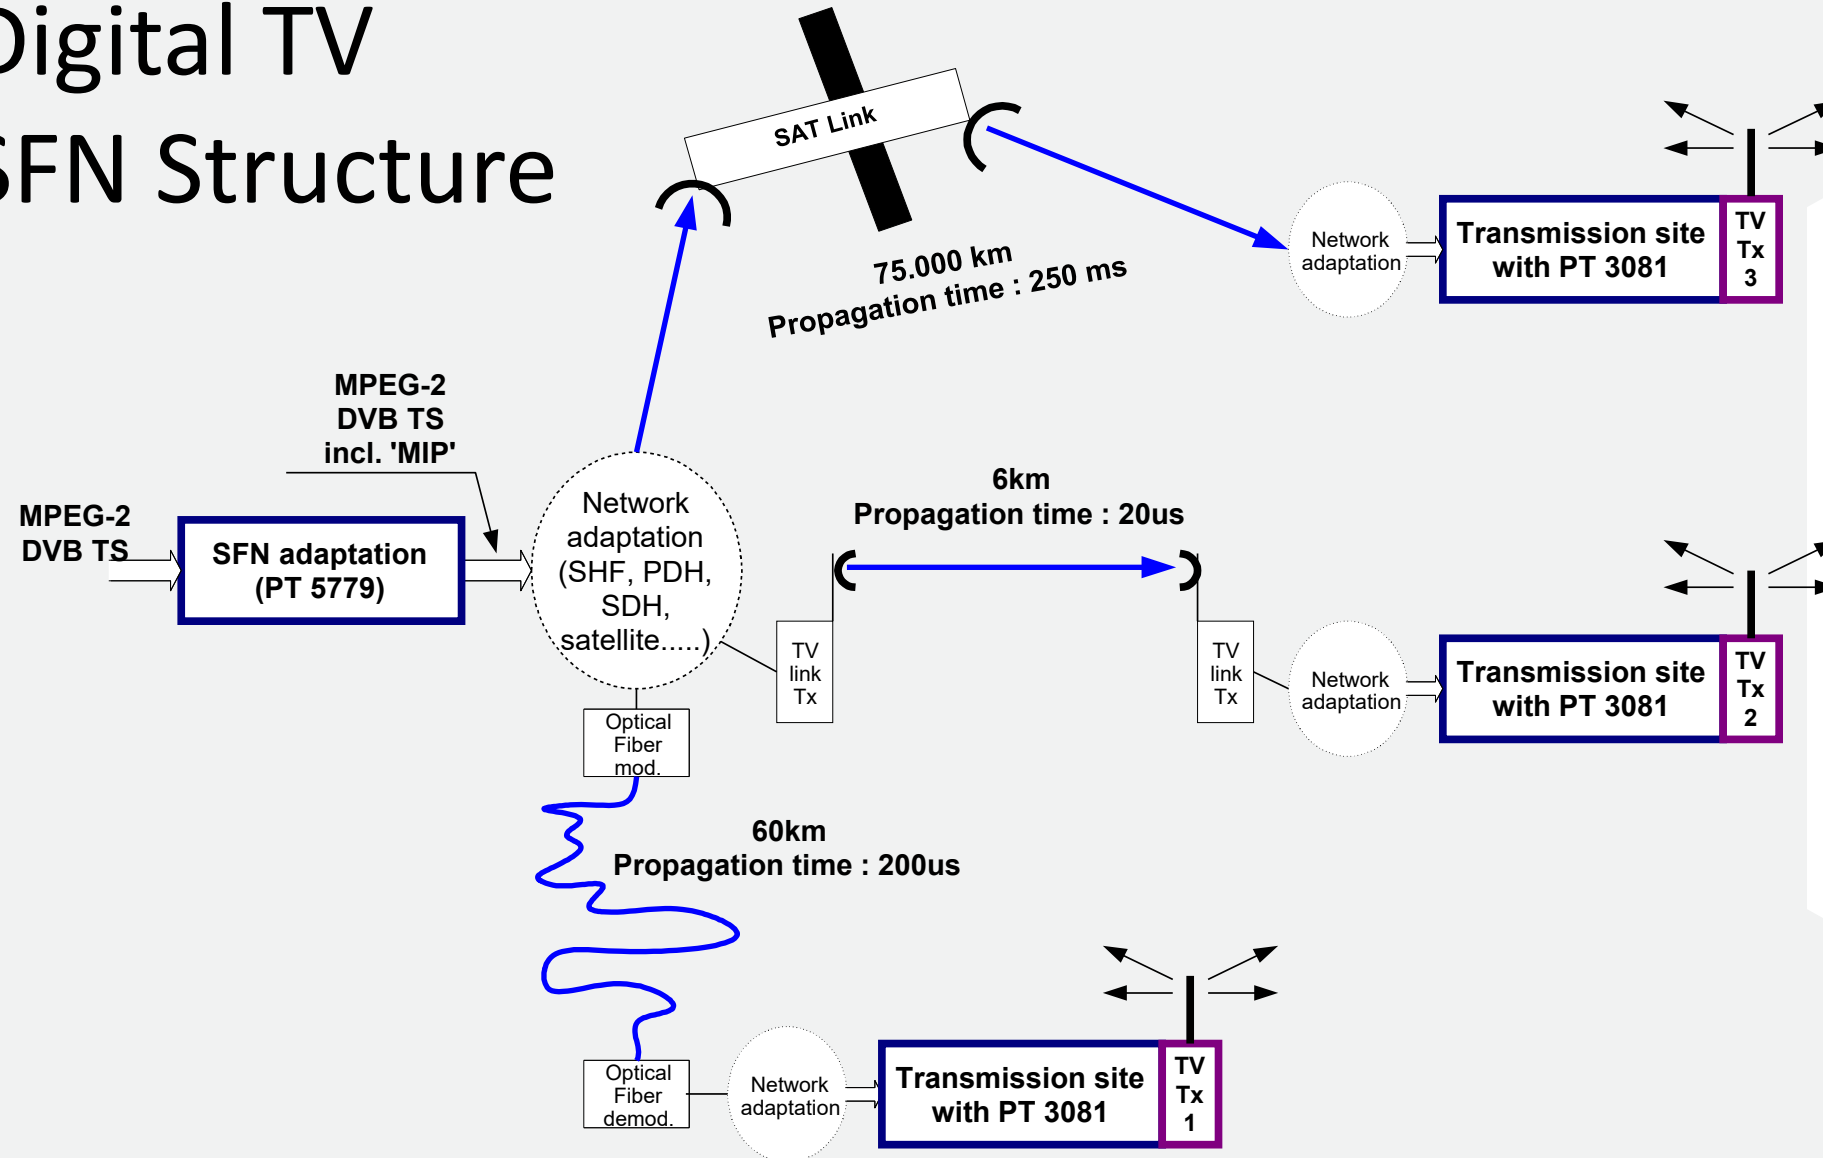

- Several programs in 8 MHz channel
- Adjacent and coadjacent channels use
- MFN or SFN operation mode
- Service cost reduction
- Owner consumption reduction due to several
- programs in the same channel
- Multimedia Service transmission
- Transmitting site power reduction

TX Control  
Monitoring platform for  
transmitters networks

**HOW DO OBJECTS SPEAK?**  
Web remote control

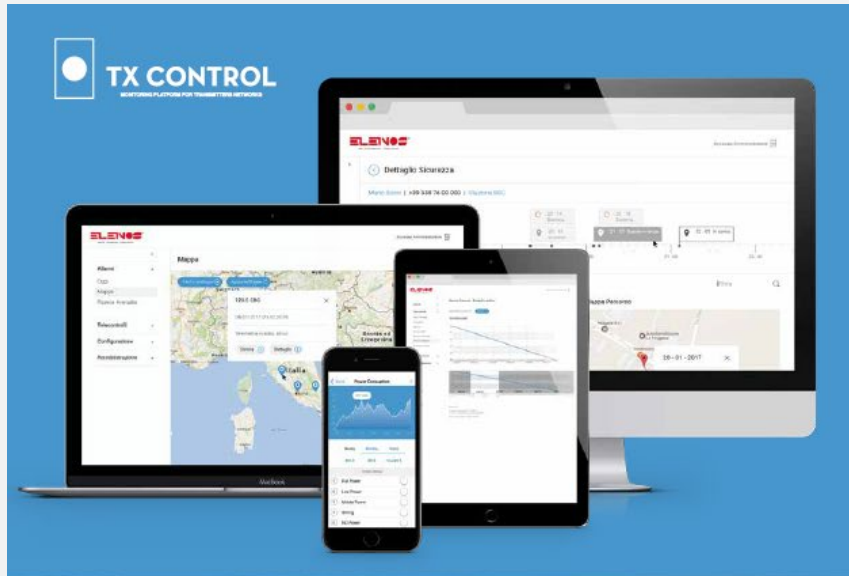

Remote control and remote sensing on the equipment to execute commands from distance and check the status.

Single apparatus, or networks, can «speak» thanks to the integration of:

- Sensors networks (humidity, pressure, light, temperature, distance...)
- microcontrollers
- microprocessors

TX Control  
Monitoring platform for  
transmitters networks

## TX CONTROL Telemetry

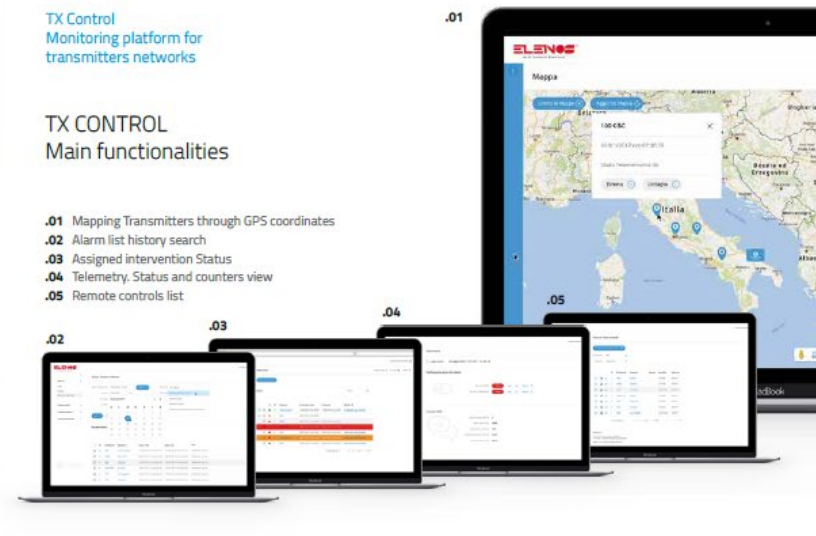

Remote monitoring for connected networks,  
distributed on multiple locations.  
Scalable platform, able to control multibrand  
transmitters.  
Today, the system monitors more than **1500**  
transmitters in real time.

TX Control  
Monitoring platform for  
transmitters networks

## TX CONTROL Main functionalities

- .01 Mapping Transmitters through GPS coordinates
- .02 Alarm list history search
- .03 Assigned intervention Status
- .04 Telemetry, Status and counters view
- .05 Remote controls list

TX Control  
Monitoring platform for  
transmitters networks

## Users access

It is possible to enter the platform by:

- browser desktop
- Native app OS / Android

Dashboard access autenticated by  
username/password

Different roles and privileges: administrator, user  
1 level, user 2 level.

User actions monitoring via log.

## Sign In

Wrong Password

TX Control  
Monitoring platform for  
transmitters networks

## Allarm Reception

The system sends alarms received from the plant to the  
numbers of the respective service inspectors and  
maintainer's email address. The available alarms are:

- Power Alarm
- Power Rfl Alarm
- Audio Alarm
- Temperature Alarm
- Supply Alarm
- Exc.exchange Alarm
- No Answer from Telecontrol

The message always contains the telecontrol code and  
can be a combination of more alarms. (example: 33  
Power Alarm – Supply Alarm)

## System

The Alarm "No Answer from telecontrol" is  
automatically generated by the system after 24 hours  
that the telecontrol did not respond to any command  
sent by a user or system.

Once the alarm is cleared, the system will send the  
"NNN No Alarm" message. If available, in the "Alarm" or  
"No Alarm" message, the system can send the value of  
Nominal and Reflected power.

TX Control  
Monitoring platform for  
transmitters networks

## Transmitters list and map

With TX Control it is possible to access  
the transmitters listing.

Possibility of localization of the transmitters by  
indications with markers on the map.

Log into the transmitter detail by single click on  
the marker.

## Today alarms and suspended alarms

			N°	Network	Station
⊖	①	●	4	BBC	New York
⊖	①	●	6	CBC	Los Angeles
⊖	①	●	6	CNBC	
⊖	①		6	RADIO IN	Brigde
⊖	①		6	BBC	Test consumo
⊖	①		6	BBC	Chicago

TX Control  
Monitoring platform for  
transmitters networks

## Alarm Fix

Once the alarm is fixed, the system sends the message  
NNN No Alarm (where NNN is the code of the  
telecontrol).

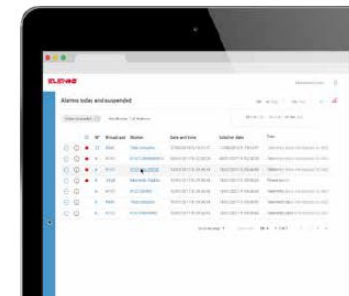

The software sends a notification of "problem fixed"  
when it receives a feedback that the message has been  
fixed from telecontrol.

There is also a procedure for controlling the alarms  
managed automatically by the system.

More specifically, in the event of an alarm, the system  
interrogates the telecontrol 20 minutes after receiving  
the SMS, then after 3 hours and finally after 24 hours.

## System

If the alarm condition has been fixed, than the user is  
advised. With this function we also handle the case  
where the telecontrol does not send a message for  
informing users about the fixing of the problem.

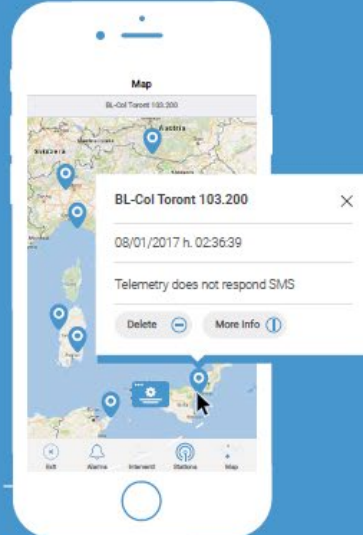

TX Control  
Monitoring platform for  
transmitters networks

## Alarm Section

For every alarm you have the telecontrol code, the name, the date of alarm, the date the alarm was solved and the type of alarm. You can also visualize the alarms on the map by clicking the "Map".

When you click on the icon, you can get more information about the alarm and interrogate the telecontrol.

TX Control  
Monitoring platform for  
transmitters networks

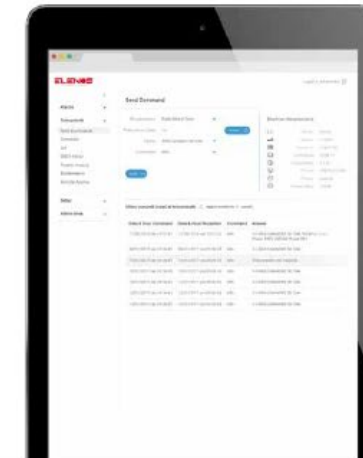

## Telecontrol Section

This section allows user to interrogate the telecontrol. To send a command, simply select the telecontrol from the menu and the command you need to send, then press the SEND button and wait for the telecontrol response.

Each command sent via internet generates an answer both on the web and through the SMS. This choice was made for safety. The page gives information about the last 3 commands sent to the telecontrol from any user including the automatic system.

For each command, the date and the control response are displayed.

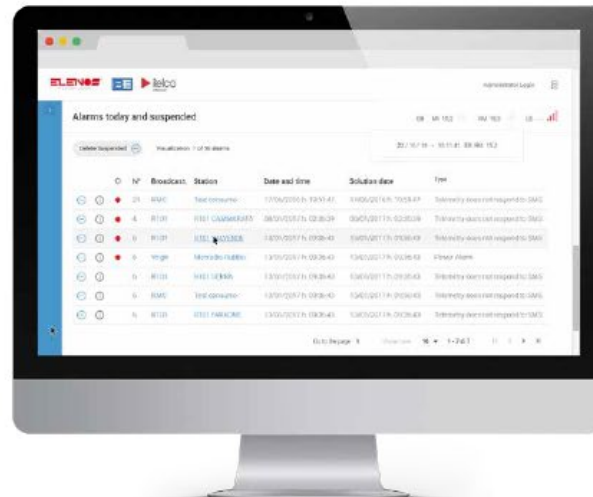

## System

TX Control  
Monitoring platform for  
transmitters networks

## Alarm Section

The page list all the active alarms (with the red flag) and the day solved ones.

TX Control  
Monitoring platform for  
transmitters networks

## Parameters Web monitoring

Manual or in "real time" update of the parameters by automatic periodic queries to the entire transmitters network.

The transmitters can be connected via data connection like GSM o SNMP to have a totally automatic system.

TX Control  
Monitoring platform for  
transmitters networks

Alarm notifications:  
email, SMS, Push notifications,

The software records the alarms from the various  
transmitters to make them available to the users by  
push notification on the iOS/Android apps, by email  
and Social Alert via WhatsApp.

SMS notification, via dedicated gateway installation.

Available for

TX Control  
Monitoring platform for  
transmitters networks

Technical requirements  
for the installation

The TX Control software is available in cloud SAAS  
solution on servers of **Elenos / Itelco** property, or in  
"in house" mode on servers of customer property.

Data anonymity is assured.

Data are registered only to ensure the quality service  
and the implementation of the predictive maintenance  
algorithms. App and Dashboard are customizable.

transmitters networks

AVATAR - PRO VERSION

Predictive  
Maintenance

The Complex algorithms in the system allow the  
anticipation of faults or the maintenance "best  
practice" reception, based on the installation and/or  
operation conditions.

Integration with  
different kinds of transmitters

The TX Control software is conceived to be  
integrated with every SMS/SNMP system.

Possibility to develop new communication  
protocols with different transmitters kinds.

Thanks to our network of dealers we provide assistance for the maintenance of your equipment over the years worldwide.

Our network of dealers are supported by our field engineers team.
